

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US98/06371

B. FIELDS SEARCHED

Electronic data bases consulted (Name of data base and where practicable terms used):

genebank

search terms: structures provided by specifically claimed SEQ ID NO. which encode the claimed polynucleotides.

BOX II. OBSERVATIONS WHERE UNITY OF INVENTION WAS LACKING

This ISA found multiple inventions as follows:

This application contains the following inventions or groups of inventions which are not so linked as to form a single inventive concept under PCT Rule 13.1. In order for all inventions to be searched, the appropriate additional search fees must be paid.

Group I, claim(s) 1-7, 24-33, drawn to no fewer than 694 different isolated polynucleotides, vectors containing the polynucleotides, host cells comprising said polynucleotide and methods of producing polypeptides.

Group II, claim(s) 8-11, drawn to no fewer than 682 different polypeptides encoded by the polynucleotides.

Group III, claim(s) 12-20, drawn to compositions comprising a single polypeptide, an antiseecretory agent, a bismuth salt or a combination thereof.

Group IV, claims 21-23, drawn to compositions comprising two *Helicobacter* polypeptides.

Group V, claim 34, drawn to a composition comprising antibodies to a polypeptide.

The polypeptide encoding polynucleotides, vectors containing them, organisms transformed with them and methods of polypeptide production are materially different from each other and therefore independent and distinct from the polypeptides and compositions of Groups II, III, and IV, as well as the protein antibodies of Group V.

This application contains claims directed to more than one species of generic invention. These species are deemed to lack Unity of Invention because they are not so linked as to form a single inventive concept under PCT Rule 13.1. In order for more than one species to be examined the appropriate additional examination fees must be paid. the species are as follows: Group I contains separate polynucleotide species for each sequence mentioned. Therefore, there is a minimum of 694 different species. Group II contains at least one polypeptide for each polynucleotide sequence mentioned. Therefore, there is a minimum of 682 species in Group II. For the Group that applicant elects, a total of 10(ten) specified sequences will be searched and no more than 4(four) specified sequences will be searched for each additional fee paid. The species listed above do not relate to a single inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: There is no relationship between or among the various nucleotide and polypeptide amino acid sequences mentioned in the claims.

INTERNATIONAL SEARCH REPORT

International application No.

PCT/US98/06371

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This international report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:

2. ☐ Claims Nos.:
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:

3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

Please See Extra Sheet.

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:

4. ☒ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
1-7,24-33;species SEQ ID NO:26,56,198,212,264,278,490,838,1220,1292

Remark on Protest

☐

The additional search fees were accompanied by the applicant's protest.

☐

No protest accompanied the payment of additional search fees.

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US98/06371

A. CLASSIFICATION OF SUBJECT MATTER

IPC(6) : A01N 43/04; A61K 31/70

US CL : 514/44

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

U.S. : 514/44

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

Please See Extra Sheet.

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X, P	TOMB, J.-F. et al. The complete genome sequence of the gastric pathogen <i>Helicobacter pylori</i> . Nature. 07 August 1997, Vol. 388, pages 539-547, see entire document.	1-7, 24-33

Further documents are listed in the continuation of Box C.

See patent family annex.

* Special categories of cited documents:	*T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
A document defining the general state of the art which is not considered to be of particular relevance	*X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
E earlier document published on or after the international filing date	*Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
L document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)	*Z* document member of the same patent family
O document referring to an oral disclosure, use, exhibition or other means	
P document published prior to the international filing date but later than the priority date claimed

-2049-

the compound of claim 8, 9, or 10 admixed with a physiologically acceptable diluent or carrier.

-2048-

29. A composition that comprises a bacterial vector comprising a DNA molecule of claim 3, said DNA molecule being placed under conditions for expression and said bacterial vector being admixed with a physiologically acceptable diluent or carrier.

5 30. The composition of claim 29, wherein said vector is selected from the group consisting of *Shigella*, *Salmonella*, *Vibrio cholerae*, *Lactobacillus*, *Bacille bilié de Calmette-Guérin*, and *Streptococcus*.

10 31. The composition of claim 24, wherein said polynucleotide is a DNA molecule that is inserted in a plasmid that is unable to replicate and to substantially integrate in a mammalian genome and is placed under conditions for expression in a mammalian cell.

15 32. An expression cassette comprising a DNA molecule of claim 3, said DNA molecule being placed under conditions for expression in a procaryotic or eucaryotic cell.

20 33. A process for producing a compound of claim 8, which comprises culturing a procaryotic or eucaryotic cell transformed or transfected with an expression cassette of claim 32, and recovering said compound from the cell culture.

25 34. A pharmaceutical composition for preventing or treating *Helicobacter* infection in a mammal, said composition comprising a prophylactically or therapeutically effective amount of an antibody that binds to

-2047-

22. The composition of claim 21, wherein the second *Helicobacter* polypeptide is a *Helicobacter* urease, or a subunit or a derivative thereof.

23. The composition of claim 11, further comprising an adjuvant.

5 24. A pharmaceutical composition for preventing or treating *Helicobacter* infection in a mammal, said composition comprising a prophylactically or therapeutically effective amount of a polynucleotide of claim 1 or 2 admixed with a physiologically acceptable diluent or carrier.

10 25. A pharmaceutical composition for preventing or treating *Helicobacter* infection in a mammal, said composition comprising a prophylactically or therapeutically effective amount of a polynucleotide of claim 4, 5, or 6 admixed with a physiologically acceptable diluent or carrier.

15 26. A pharmaceutical composition for preventing or treating *Helicobacter* infection in a mammal, said composition comprising a prophylactically or therapeutically effective amount of a polynucleotide of claim 7 admixed with a physiologically acceptable diluent or carrier.

20 27. A composition comprising a viral vector, in the genome of which is inserted a DNA molecule of claim 3, said DNA molecule being placed under conditions for expression in a mammalian cell and said viral vector being admixed with a physiologically acceptable diluent or carrier.

25 28. The composition of claim 27, wherein said viral vector is a poxvirus.

-2046-

14. The composition of claim 12, wherein said bismuth salt is selected from the group consisting of bismuth subcitrate and bismuth subsalicylate.

15. The composition of claim 12, wherein said antisecretory agent is a proton pump inhibitor.

5

16. The composition of claim 15, wherein said proton pump inhibitor is selected from the group consisting of omeprazole, lansoprazole, and pantoprazole.

10

17. The composition of claim 12, wherein said antisecretory agent is an H₂-receptor antagonist.

15

18. The composition of claim 17, wherein said H₂-receptor antagonist is selected from the group consisting of ranitidine, cimetidine, famotidine, nizatidine, and roxatidine.

19. The composition of claim 12, wherein said antisecretory agent is a prostaglandin analog.

20

20. The composition of claim 19, wherein said prostaglandin analog is misoprostil or enprostil.

25

21. The composition of claim 11, further comprising a prophylactically or therapeutically effective amount of a second *Helicobacter* polypeptide or a derivative thereof.

(ii) a derivative of said *Helicobacter* polypeptide.

9. The compound of claim 8, which is the mature form or a derivative of a polypeptide encoded by a DNA molecule of claim 4.

10. The compound of claim 8, which is the mature form or a derivative of a polypeptide encoded by a DNA molecule of claim 5.

11. A pharmaceutical composition for preventing or treating *Helicobacter* infection in a mammal, said composition comprising a prophylactically or therapeutically effective amount of a compound of claim 8, 9, or 10 admixed with a physiologically acceptable diluent or carrier.

12. The composition of claim 11, further comprising an antibiotic, an antisecretory agent, a bismuth salt, or a combination thereof.

13. The composition of claim 12, wherein said antibiotic is selected from the group consisting of amoxicillin, clarithromycin, tetracycline, metronidazole, and erythromycin.

-2034-

4. The isolated polynucleotide of claim 1, which is a DNA molecule that can be amplified by polymerase chain reaction from a *Helicobacter* genome.

5. The isolated DNA molecule of claim 4, which can be amplified by the polymerase chain reaction from a *Helicobacter pylori* genome.

6. The isolated polynucleotide of claim 1, which is a DNA molecule that encodes the mature form or a derivative of a polypeptide encoded by the DNA molecule of claim 4.

7. The isolated polynucleotide of claim 1, which is a DNA molecule that encodes the mature form or a derivative of a polypeptide encoded by the DNA molecule of claim 5.

8. A compound, in a substantially purified form, that is the mature form or a derivative of a polypeptide comprising an amino acid sequence that is homologous to a *Helicobacter* polypeptide selected from the group consisting of GHPO 35 (SEQ ID NO:2), GHPO 55 (SEQ ID NO:4), GHPO 78 (SEQ ID NO:6), GHPO 89 (SEQ ID NO:8), GHPO 129 (SEQ ID NO:10), GHPO 541 (SEQ ID NO:12), GHPO 607 (SEQ ID NO:14), GHPO 635 (SEQ ID NO:16), GHPO 701 (SEQ ID NO:18), GHPO 712 (SEQ ID NO:20), GHPO 761 (SEQ ID NO:22), GHPO 838 (SEQ ID NO:24), GHPO 1034 (SEQ ID NO:26), GHPO 1085 (SEQ ID NO:28), GHPO 1213 (SEQ ID NO:30), GHPO 1255 (SEQ ID NO:32), GHPO 1308 (SEQ ID NO:34), GHPO 1389 (SEQ ID NO:36), GHPO 1706 (SEQ ID NO:38), GHPO 234 (SEQ ID NO:40), GHPO 314 (SEQ ID NO:42), GHPO 510 (SEQ ID NO:44), GHPO 603 (SEQ ID

(ii) a derivative of said *Helicobacter* polypeptide.

2. The isolated polynucleotide of claim 1, which encodes a mature form of said *Helicobacter* polypeptide.

3. The isolated polynucleotide of claim 1 or 2, wherein the polynucleotide is a DNA molecule.

-2023-

1. An isolated polynucleotide that encodes:

(i) a polypeptide comprising an amino acid sequence that is homologous to the amino acid sequence of a *Helicobacter* polypeptide selected from the group consisting of GHPO 35 (SEQ ID NO:2), GHPO 55 (SEQ ID NO:4), GHPO 78 (SEQ ID NO:6), GHPO 89 (SEQ ID NO:8), GHPO 129 (SEQ ID NO:10), GHPO 541 (SEQ ID NO:12), GHPO 607 (SEQ ID NO:14), GHPO 635 (SEQ ID NO:16), GHPO 701 (SEQ ID NO:18), GHPO 712 (SEQ ID NO:20), GHPO 761 (SEQ ID NO:22), GHPO 838 (SEQ ID NO:24), GHPO 1034 (SEQ ID NO:26), GHPO 1085 (SEQ ID NO:28), GHPO 1213 (SEQ ID NO:30), GHPO 1255 (SEQ ID NO:32), GHPO 1308 (SEQ ID NO:34), GHPO 1389 (SEQ ID NO:36), GHPO 1706 (SEQ ID NO:38), GHPO 234 (SEQ ID NO:40), GHPO 314 (SEQ ID NO:42), GHPO 510 (SEQ ID NO:44), GHPO 603 (SEQ ID NO:46), GHPO 937 (SEQ ID NO:48), GHPO 1027 (SEQ ID NO:50), GHPO 1099 (SEQ ID NO:52), GHPO 1151 (SEQ ID NO:54), GHPO 1275 (SEQ ID NO:56), GHPO 1365 (SEQ ID NO:58), GHPO 1578 (SEQ ID NO:60), GHPO 22 (SEQ ID NO:62), GHPO 58 (SEQ ID NO:64), GHPO 200 (SEQ ID NO:66), GHPO 558 (SEQ ID NO:68), GHPO 563 (SEQ ID NO:70), GHPO 695 (SEQ ID NO:72), GHPO 699 (SEQ ID NO:74), GHPO 702 (SEQ ID NO:76), GHPO 709 (SEQ ID NO:78), GHPO 741 (SEQ ID NO:80), GHPO 762 (SEQ ID NO:82), GHPO 827 (SEQ ID NO:84), GHPO 852 (SEQ ID NO:86), GHPO 1013 (SEQ ID NO:88), GHPO 1020 (SEQ ID NO:90), GHPO 1031 (SEQ ID NO:92), GHPO 1052 (SEQ ID NO:94), GHPO 1127 (SEQ ID NO:96), GHPO 1149 (SEQ ID NO:98), GHPO 1176 (SEQ ID NO:100), GHPO 1250 (SEQ ID NO:102), GHPO 1312 (SEQ ID NO:104), GHPO 1358 (SEQ ID NO:106), GHPO 1490 (SEQ ID NO:108), GHPO 1559 (SEQ ID NO:110), GHPO 1651 (SEQ ID NO:112), GHPO 1726 (SEQ ID NO:114), GHPO 1780 (SEQ ID NO:116), GHPO 895 (SEQ ID NO:118), GHPO 1447 (SEQ ID

Other embodiments are within the following claims.

What is claimed is:

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:1375:

CGCGGATCCG AGGAAATAGC ATGTTAATAA CC

32

(2) INFORMATION FOR SEQ ID NO:1376:

(i) SEQUENCE CHARACTERISTICS:

(A) LENGTH: 33 base pairs

(B) TYPE: nucleic acid

(C) STRANDEDNESS: single

(D) TOPOLOGY: linear

(ii) MOLECULE TYPE: cDNA

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:1376:

CCGCTCGAGT CACTGCTTGC ATGACTTATT CCA

33

GCGGATCCTT TTCTTCAATG TTG

24

(2) INFORMATION FOR SEQ ID NO:1372:

(i) SEQUENCE CHARACTERISTICS:

- (A) LENGTH: 29 base pairs
- (B) TYPE: nucleic acid
- (C) STRANDEDNESS: single
- (D) TOPOLOGY: linear

(ii) MOLECULE TYPE: Genomic DNA

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:1372:

CCGCTCGAGT CAAAGTTTTA AACAAATTC

29

(2) INFORMATION FOR SEQ ID NO:1373:

(i) SEQUENCE CHARACTERISTICS:

- (A) LENGTH: 23 base pairs
- (B) TYPE: nucleic acid
- (C) STRANDEDNESS: single
- (D) TOPOLOGY: linear

(ii) MOLECULE TYPE: cDNA

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:1373:

CCGAATTCGG TTATAAAGCC CCT

23

(2) INFORMATION FOR SEQ ID NO:1374:

(i) SEQUENCE CHARACTERISTICS:

- (A) LENGTH: 24 base pairs
- (B) TYPE: nucleic acid
- (C) STRANDEDNESS: single
- (D) TOPOLOGY: linear

(ii) MOLECULE TYPE: cDNA

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:1374:

CCGCTCGAGT TAAGGCTGAT TTAA

24

(2) INFORMATION FOR SEQ ID NO:1375:

(i) SEQUENCE CHARACTERISTICS:

- (A) LENGTH: 32 base pairs
- (B) TYPE: nucleic acid
- (C) STRANDEDNESS: single
- (D) TOPOLOGY: linear

(ii) MOLECULE TYPE: cDNA

CGCGGATCCG AAGACATGTG CAACCGATG

29

(2) INFORMATION FOR SEQ ID NO:1368:

(i) SEQUENCE CHARACTERISTICS:

- (A) LENGTH: 30 base pairs
- (B) TYPE: nucleic acid
- (C) STRANDEDNESS: single
- (D) TOPOLOGY: linear

(ii) MOLECULE TYPE: Genomic DNA

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:1368:

CCGCTCGAGC TAAAAGTTTT GCAAAATCAC

30

(2) INFORMATION FOR SEQ ID NO:1369:

(i) SEQUENCE CHARACTERISTICS:

- (A) LENGTH: 32 base pairs
- (B) TYPE: nucleic acid
- (C) STRANDEDNESS: single
- (D) TOPOLOGY: linear

(ii) MOLECULE TYPE: Genomic DNA

(2) INFORMATION FOR SEQ ID NO:1358:

(i) SEQUENCE CHARACTERISTICS:

- (A) LENGTH: 1743 amino acids
- (B) TYPE: amino acid
- (C) STRANDEDNESS: single
- (D) TOPOLOGY: linear

(ii) MOLECULE TYPE: protein

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:1358:

```

(2) INFORMATION FOR SEQ ID NO:840:

(i) SEQUENCE CHARACTERISTICS:

- (A) LENGTH: 274 amino acids
- (B) TYPE: amino acid
- (C) STRANDEDNESS: single
- (D) TOPOLOGY: linear

(ii) MOLECULE TYPE: protein

(xi) SEQUENCE DESCRIPTION: SEQ ID NO:840:

Met	Leu	Glu	Asn	Met	Gln	Asp	Ile	Ser	Leu	Gln	Ser	Ser	His	Glu	Val
1				5				10						15
